Cree Nation Government – Eeyou Communications Network

Presentation to CRTC Hearing

on Basic Telecommunications Services

Telecommunications policy should include these fundamental elements:

- *Broadband and Internet protocol (IP) technology are basic elements in the telecommunications system.*
- *All Canadians in all regions have a right to all basic services in the telecommunications delivery system at affordable rates.*
- *Basic Service Objectives should include broadband/IP services for remote/rural/northern regions and should be subsidized in High Cost Serving Areas.*
- *In HCSA's where subsidies are awarded, all Basic Services should be an obligation, not simply an objective.*
